

Radiographic Surveillance for Arterial Dysplasia/FMD

In order to facilitate a uniform clinical protocol and workflow when ordering the complete surveillance by CT, Diagnostic Radiology has implemented a new SmartSet for head through pelvis CTA. MRA, such as for head/neck or chest imaging, would need to be ordered alternatively to the corresponding CTs in the checklist.

The name of the SmartSet is “CAR SUR Arterial Dysplasia / FMD” in which the “Reason for Exam” fields for each CT order are defaulted with the indication “Arterial fibromuscular dysplasia.”, along with that text defaulted to obtain the appropriate protocols and reformatting.

When ordering in MiCHART, this SmartSet can be marked as a Favorite in the SmartSet Activity by starring the SmartSet for more efficient access in your personal log-in.
